## **The Central Nervous System** Per Brodal

The Central Nervous System: Structure and Function, Fourth Edition continues the tradition of one of the most respected textbooks in clinical neuroscience by providing medical students the knowledge and understanding of neuroscience as a basis for clinical thinking. While remaining concise and easy to read, the text encourages reflection and critical thinking of established facts and scientific conjecture and will be of interest to medical, graduate, and undergraduate students alike. Prof Per Brodal provides clear descriptions of brain structures and relates them to their functional properties by incorporating data from molecular biology to clinical neurology. The numerous full color line drawings - based on the authors long experience of teaching undergraduate students and new to this edition - make it easier to understand complex structural and functional relationships. Thoroughly revised, this fourth edition goes further in integrating material from all fields of the neurosciences. Now divided into 8 Sections with a total of 34 Chapters, each chapter is introduced by a brief overview of what the student can expect to learn. New material has been incorporated in all chapters while maintaining the scope and coverage that has established The Central Nervous System: Structure and Function as the preeminent neuroscience textbook.
