Geochemical Rate Models: An Introduction to Geochemical Kinetics

Professor J. Donald Rimstidt

Geochemical Rate Models: An Introduction to Geochemical Kinetics Professor J. Donald Rimstidt

This well-organised, comprehensive reference and textbook describes rate models developed from fundamental kinetic theory and presents models using consistent terminology and notation. Major topics include rate equations, reactor theory, transition state theory, surface reactivity, advective and diffusive transport, aggregation kinetics, nucleation kinetics, and solid-solid transformation rates. The theoretical basis and mathematical derivation of each model is presented in detail and illustrated with worked examples from real-world applications to geochemical problems. The book is also supported by online resources: self-study problems put students' new learning into practice, and spreadsheets provide the full data used in figures and examples, enabling students to manipulate the data for themselves. This is an ideal overview for graduate students, providing a solid understanding of geochemical kinetics. It will also provide researchers and professional geochemists with a valuable reference for solving practical and scientific problems.

From reader reviews:

Edward Gilbert:

The book Geochemical Rate Models: An Introduction to Geochemical Kinetics can give more knowledge and information about everything you want. So why must we leave the great thing like a book Geochemical Rate Models: An Introduction to Geochemical Kinetics? Several of you have a different opinion about publication. But one aim in which book can give many details for us. It is absolutely right. Right now, try to closer together with your book. Knowledge or information that you take for that, you can give for each other; you could share all of these. Book Geochemical Rate Models: An Introduction to Geochemical Kinetics has simple shape however, you know: it has great and massive function for you. You can appear the enormous world by wide open and read a book. So it is very wonderful.

Manuel Britton:

Often the book Geochemical Rate Models: An Introduction to Geochemical Kinetics will bring one to the new experience of reading a book. The author style to elucidate the idea is very unique. When you try to find new book to study, this book very acceptable to you. The book Geochemical Rate Models: An Introduction to Geochemical Kinetics is much recommended to you to learn. You can also get the e-book from your official web site, so you can quickly to read the book.

Christine Erhart:

Reading a e-book tends to be new life style with this era globalization. With reading through you can get a lot of information that could give you benefit in your life. Along with book everyone in this world can easily share their idea. Publications can also inspire a lot of people. Plenty of author can inspire all their reader with their story or maybe their experience. Not only the storyline that share in the ebooks. But also they write about the ability about something that you need illustration. How to get the good score toefl, or how to teach children, there are many kinds of book which exist now. The authors on earth always try to improve their ability in writing, they also doing some investigation before they write to the book. One of them is this Geochemical Rate Models: An Introduction to Geochemical Kinetics.

Robert Ross:

Playing with family inside a park, coming to see the coastal world or hanging out with close friends is thing that usually you will have done when you have spare time, after that why you don't try issue that really opposite from that. A single activity that make you not experiencing tired but still relaxing, trilling like on roller coaster you are ride on and with addition of information. Even you love Geochemical Rate Models: An Introduction to Geochemical Kinetics, you can enjoy both. It is fine combination right, you still desire to miss it? What kind of hang-out type is it? Oh can occur its mind hangout fellas. What? Still don't understand it, oh come on its called reading friends.
