Have you ever asked a question and gotten too short of an answer and wanted to know more? Or have you asked a question and gotten too much detail in the answer, and ducked for cover as the long words continued flying over your head ? This book allows you to make that choice along the way as you read !

There are a lot of questions about everyday things, as well as deep concept things, that are asked thousands of times a day. Depending on who is asked, and who does the asking, the answer may not get across. Using a simple three-level answer approach, this book tackles those questions, and allows you to start with the easy answer, or venture into a bit more detail if interested. And for those questions where you've got a drink and a couch and your electronic book reader, there's the third level of answer just waiting for that quiet moment.

We tackle really small things, like "What do you get when you keep dividing an atom into parts?" to really big cosmic things like "How big is the universe". We also tackle fun things to think about, like "Is space nothing or something?". We will also take a look at common questions about the earth, like "Why is the sky blue"? Oh, and you think you know that one? We'll also answer timely question "What do you get when uranium fissions?",

For each question, we'll provide a first easy answer that you can take and run with and carry with you without too much work.

Then we'll provide you with an answer with enough detail to impress friends and understand the question more than you first did - we hope!.

Then at the third level, we'll unleash as full an explanation as possible without throwing a lot of esoteric equations at you. OK, we throw some in here and there for those of you that like to see why the answer is that way, but you can get by fine if you have the TV off, and take a few minutes with the answer.

Hopefully you'll be fascinated with the different levels that a question can be answered. Just when one level of answer sounds good enough, a whole new vista emerges when you dig a little deeper. Enjoy this, the first of many subject areas that will be covered in this series.
